WE MAKE

CHEMISTRY

WORK

SURFACE IMPROVEMENT TECHNOLOGY

Surface improvement technology. Quite a mouthful. But what it means for you is simple: we develop and supply products that allow you to clean, protect and maintain all types of surfaces. Homes, business premises, floors, facades, bridges, viaducts, trains... with Mavro International they are in clean, good hands. Our high-quality products for anti-graffiti, industrial cleaning and conservation offer a solution for every challenge.

Maarten Verduin
Managing Director

We have a solution for every problem.
Cliché? True. And we make it worse: no
challenge is too big for us.
But we mean it.

We have been around for a few years. And in all that time, we have seen many formulas, methods and applications pass by. Often our conclusion was: it could be better. The product wasn't right, or it was used incorrectly. And that is quite logical, because every challenge requires its own approach. So we decided to do it ourselves...

WE CLEAN ANY SURFACE AND PROTECT IT LIKE THE BEST

Difficult to find a cleaner that meets all your requirements? We are up to the challenge. We have the most effective cleaner for every type of surface. It can't be dirty enough for us, whatever sector you operate in.

What is beautiful must stay beautiful

Nothing is more important than the first impression. This applies to people, but also to façades, rolling stock, installations and everything you want to look good. That is why cleaning alone is not enough. Protection is just as important. Against moisture, atmospheric pollution, graffiti and so on. Then it stays beautiful!

Always personalised advice

How we protect depends on the surface and the desired look. For example, if you want to treat a monument, but still maintain its character, we go for impregnation. You don't see anything and yet the surface has the best protection.

Coating can also be transparent, for example to keep a mural beautiful. Prefer a coating in your favourite colour? No problem! Our specialists always provide tailor-made advice.

◁ Rolling stock
◁ Infrastructure

◁ Public spaces
◁ Housing & real estate

Chemistry is never done

Our cleaners and coatings are always evolving. We are constantly innovating. We find new angles and improve our formulas. Because chemistry never stands still and on our way to the perfect solution, we always see new opportunities.

Unlimited sustainability

Chemistry and sustainability go very well together. Even though some people think otherwise. We prefer to work with renewable and circular raw materials, such as bio-based ones. This way, we develop a sustainable product range that can last for many years and think generations ahead.

At Mavro, we are constantly
on the move. After all, we
believe there is always room
for improvement.

Co
Technical Sales Representative

“Our cleaners and coatings are constantly evolving. For better quality and for future generations.”

**“MAVRO REALLY
THINKS ALONG WITH
US. THEY COME UP
WITH A SOLUTION FOR
EVERYTHING. THAT**

Jeroen Boomsma - NS Supervisor

We have no secrets. Truly. Want to take a look inside? Drop by and present us with your challenge. We'll come up with that solution...

SIMPLY IN OUR LAB

Develop, maintain, test; just like our graffiti removers, strippers, coatings and more, we are always on the move. We couldn't be more different. Nature of the beast. That's why our lab is our sanctuary. Always finding a solution, that's what we do it for. That's what gives us energy..

We'll show you

But we are not secretive about that sanctuary at all. We are transparent and accessible. So just drop by and we'll show you how your product is created.

We work every day to create
sustainable solutions that will
shape tomorrow's world.

Brent
Laboratory technician

We have more than 200 cleaners and protectors in our range. We test these on the most challenging surfaces and conditions. But the best test is daily practice. So if, when using our products, you come across things that really need to be improved, we would like to hear about it. That way we can be sure that our chemistry really does what it is supposed to do.

OUR 213* PRODUCTS

Our products are proving themselves every day. How do we know that? Our customers and partners let us know time after time. So we have products for almost every application and are always helping our customers find new solutions.

Because every contamination requires a specific cleaner and we take care of that. Each type of substrate or object also requires our expertise to find the best suitable solution, as well as our protective products and construction chemicals.

* Is a moment's notice, of course. We develop new products every day.

Removers

- ◁ Graffiti removers
- ◁ Shadow removers
- ◁ Ink removers
- ◁ Paint strippers and other removers

Specialized cleaners

- ◁ Facade cleaners
- ◁ Multi-purpose cleaners
- ◁ Professional cleaners
- ◁ Special cleaning products

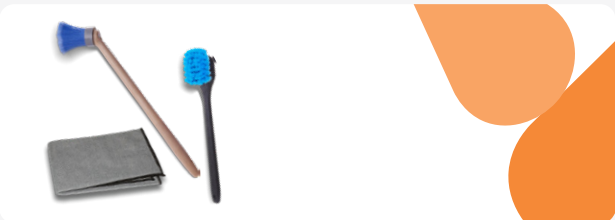

Protective coatings

- ◁ Anti-graffiti coatings
- ◁ Renovation coatings
- ◁ Nano and ceramic coatings
- ◁ Wall and floor impregnation products
- ◁ Stainless steel- and other coatings

Construction chemicals

- ◁ Industrial epoxy floor coatings
- ◁ Coating systems
- ◁ Epoxy mortars
- ◁ Roof coating

Other products

- ◁ Industrial epoxy floor coatings
- ◁ Coating systems
- ◁ Epoxy mortars
- ◁ Roof coating

DEVELOPING LOCALLY, OPERATING GLOBALLY

We operate all over the world, but we like to produce and develop locally. Simply because it works great. With modern equipment and smart automation, we guarantee consistently high quality and remain flexible enough to respond to your wishes. A 100-millilitre pack or a tank of 50,000 litres? We deliver what you ask for.

ISO 9001: your guarantee of quality

The best. That is the demand we set for ourselves. Because quality is the only thing that counts. And we're not just talking about products, but also about service and advice. That's why we have a ISO 9001 certification. The worldwide standard for quality management.

Sustainable packaging

The greener the better. So we use as many recycled materials as possible for our packaging. Like these buckets; entirely made of recycled plastic. That saves 95% of fossil fuels.

Packaging for products with an ADR label gives a little more challenge. This is because the origin of the raw materials must be clear. With recycling, you never quite know. We do return the buckets, jerrycans and other plastic packaging we use ourselves to the supplier. This is how they become raw material for new products.

CUSTOMIZED SOLUTIONS? YES

We supply more than 200 products from our own laboratory. Quite a range, with a suitable solution for almost every request. But if something is still missing, we will make it. We can go back into our lab and that is what we like the most.

So if you have a unique case, we will be happy to bite into it. It gives us energy. We like to go all the way. For a suitable solution and to learn something new. And if we really can't work it out, we just say so.

“Together we will find the solution to your challenge, we don’t make a big deal about it.”

We go beyond delivering a product.
Just as important; we are on top of the
application. Everything for a successful
result.

GOOD CONVERSATION. GOOD

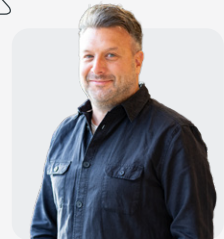

Finding the best solution together always starts with a good conversation. At our site or yours, we don't mind. Tell us what your aims and requirements are, show us your project, give an insight into the challenge. It is our basis for good advice.

We will give you a tailor-made advice report. In it, of course, you'll see what product you need, but we also tell you how to use it. Step-by-step, in crystal clear language.

In addition, your specialist remains involved throughout the process. They think along with you and make adjustments where necessary. Think of it as a sparring partner who takes his time until the job is done. And afterwards, if you need more support.

“Being active in the field every day, we know better than anyone how to tackle specific challenges.”

Jeroen
Technical Sales Representative

The first contact

Present us your challenge

Inspection and testing

We want to fully understand the situation

Well-considered advice

Tailor-made, from the 'what' to the 'how'

Training

We show you how to make chemistry work for you

Project support

We are there during start-up

Application

Now it's up to you

Evaluation

We call you with the question: did it work?

Your specialist

Always under the dial. We like that ourselves too

“THERE IS A
DIFFERENCE BETWEEN
KNOWING A PRODUCT,
AND UNDERSTANDING A

WE TRAIN EVERYONE WHO USES OUR PRODUCTS

We make chemistry work. And we do so by sharing our knowledge. Because the correct application of our products also contributes to the best possible result.

Trainings are also tailor-made

If this is the first time your employees are using our products, we help them get started with a training

course. We tell, show and do it together. We always match the training to your wishes and needs. In other words, a tailor-made program.

Theory & practice

No knowledge without skills. That is why we always put the knowledge into practice. This way, you not only understand it, but also know how to do it.

“You have no benefits from a good product if you don’t use it properly.”

Robin
Technical Sales Representative

WE WILL CONTINUE UNTIL WE ARE PROUD TOO

Chemistry is magic! We can't get enough of it and always make the most of it. No 7's or 8's for us. We want a solution that makes everyone happy, including ourselves.

That is why we continuously develop, train people, build our relationships, think along with you and keep a grip on all processes. And: together we know more, we are better and we get further.

We make chemistry work. With the emphasis on 'we'. Come along and see for yourself.

- ◁ A solution for every surface
- ◁ Personal advice
- ◁ In-house production

- ◁ Continuous development in our lab
- ◁ Tailor-made solutions for every request
- ◁ Training to make chemistry work for you

“We make sure it’s right on all sides, so we can really say: we make chemistry work.”

AND THAT'S HOW WE MAKE CHEMISTRY WORK!

Bjorn
Technical Sales Representative

Curious? We understand. Come by our
'kitchen' and we'll show you.

**“PRESENT YOUR
CHALLENGE WITH US
STRAIGHT AWAY. WE’LL
COME UP WITH THAT
SOLUTION.”**
